Teri,

See below for Dan's comments on contamination concerns in the UK.

Hi Gary,

The manuscript is being submitted. We're still having resolution issues with the figures, but Tanya's working on it.

I'm glad 3M is seriously considering a true contamination study. That is the only type of study that will put this issue to bed. But for what it is worth, I took the liberty of presenting our laminar flow results last week at the Evidence-based Perioperative Medicine Meeting in London. Folks there commented that many of their orthopedic surgeons no longer allow forced-air. Reversing that trend will probably require a major paper in the Journal of Bone and Joint Surgery or something similar.

Regards, Dan.

Hi Dan,

Thanks for the yeoman work on the paper. It is greatly appreciated. Has it gone in yet?

Your idea for the new study is of great interest to us. We're pursuing some 3M experts in test methodology who may advise us on how best to do it. Stay tuned.

Gary

Hi Gary,

Thanks much! Great that the manuscript is finally accepted. On to a culture study?

Dan,

Special software is necessary to convert the TIFF images into the proper format. I'll take care of it tomorrow. I'll send you versions in both CMYK and grayscale color. One of these should work for the Journal.

Gary
